Introductory remarks

On April 15th and 16th 2010 about 40 Asian and European higher education experts have attended a seminar on credit systems and learning outcomes organized by the ASEM Education Secretariat. In the course of this seminar, the participants agreed on the following recommendations:

1. To improve and deepen information on developments in both regions based on the seminar and the descriptions at country level. The ASEM Education Secretariat offered to provide an in depth analysis of the country reports on credits and learning outcomes delivered by the ASEM countries.
2. To find out the predominant goals of mobility.
3. To elaborate the common ground of credit systems and learning outcomes in Asia and Europe.
4. To promote joint developments of study programmes between Asian and European universities, but not necessarily with double or joint degree (at BA, MA and/or doctoral level).
5. To improve interregional cooperation in the field of quality assurance between agencies and university networks in Asia and Europe.
6. To improve transparency: study programmes, credit awards and learning outcomes should (also) be presented online.
7. To set up a network of Asian and European experts of higher education for improving information and advice.
8. To meet again in a follow-up seminar in autumn 2011 and to take stock of the progress made since the Berlin meeting.

In order to meet the demand of transparency of existing credit systems in ASEM countries the ASEM Education Secretariat tries to provide initial data about the higher education systems in the ASEM countries, with a focus on credits and quality assurance systems.

Regarding data for the European ASEM member countries, the information provided by the EURIDYCE report , "Focus on Higher Education in Europe 2010", was used. Concerning the Asian ASEM member countries the methodologies adopted included desk and empiric research. Questionnaires on credit systems were sent to the Asian ASEM members. However, further investigation for more comprehensive data is still required. In this matter proactive cooperation of all ASEM member countries is of essential importance. Specific issues explored in this compilation include:

- ◇ General introduction to the higher education systems in Asian ASEM countries
- ◇ General information on higher education institutions in Asian ASEM countries
- ◇ Participation in multilateral or bilateral higher education programmes
- ◇ Quality assurance systems
- ◇ Credit systems and learning outcomes

Introductory remarks

Since the ASEM 8 summit (Brussels 4-5 October 2010) 3 countries have joined ASEM: Australia, New Zealand and Russia. They are called the “Third group ASEM member countries” and are in a separate chapter.

The information on the national higher education systems of Australia and New Zealand follow the same logic as the information on the Asian ASEM member countries.

Russia is a Bologna signatory country, therefore the information on the Russian national higher education system is taken from the above mentioned EURIDYCE report

This compilation is non exhaustive. It is meant to be a first step towards a common understanding of terminology and concepts concerning credits and learning outcomes in ASEM member countries. We welcome your comments and further information in order to improve this updated compilation.

Brunei Darussalam

Key information on education system and credits and learning outcomes in particular

Higher education system	Higher education is provided by the University of Brunei Darussalam and various technical and vocational institutes.
Types of higher education institutions	<ul style="list-style-type: none"> ◇ University ◇ Institute
Number of higher education institutions	6
University level studies	<ul style="list-style-type: none"> ◇ Bachelor ◇ Postgraduate Certificate ◇ Master ◇ Doctor
Description	<p><u>University level first stage:</u> Bachelor's Degree:</p> <p>The main stage of higher education leads, after studies lasting between four and six years, to the Bachelor's Degree (Bachelor of Arts, Bachelor of Science, Bachelor of Business, Bachelor of Health Science) in such fields as Business Studies, Arts and Social Sciences, Medicine and Pure Science.</p> <p><u>University level second stage:</u> Master's Degree</p> <p>A Master's Degree is conferred after one to two years' study beyond the Bachelor's Degree. It can be awarded through coursework and a project or through coursework and a dissertation, or through dissertation only.</p> <p><u>University level third stage:</u> Doctorate:</p> <p>PhD programmes are available in all faculties except in the Institute of Medicine.</p>
Participation of country in multilateral or bilateral higher education programmes	<ul style="list-style-type: none"> ◇ AUN-ACTS (Asia University Network) ◇ SEAMEO ◇ UMAP-UCTS ◇ ASEM
Prospective reforms	UBD is planning to link its entire education system (from bachelor, master, and up to PhD level) to the credit system. Brunei Darussalam is in the process of developing a National Qualifications Framework and a credit system will be included in the discussions.

Brunei Darussalam

Key information on education system and credits and learning outcomes in particular

Brunei Darussalam National Accreditation Council (BDNAC)	Quality assurance (QA) QA body
Accreditation and recognition of qualification (programmes and institutions)	Scope (programme / institution)
Brunei National Qualifications Frameworks is in initial stage	Qualifications Framework
The need for assessing and accrediting qualifications are normally due to following circumstances:	Voluntary / compulsory
<ul style="list-style-type: none"> ◇ When the government authorities proposed to send students or staffs to undergo training to institutions outside Brunei ◇ When the government authorities especially Public Service Department and Public Service Commission propose to recruit personnel into public service ◇ When places and scholarships are offered from government to government ◇ When the local higher education institutions (public or private) plan to organise new course ◇ When authorities from registration board in certain profession require opinion regarding a particular qualification to enable consideration of registration or licensing of the graduates 	
<ul style="list-style-type: none"> ◇ Receiving and acknowledging queries or applications ◇ Gathering relevant information ◇ Preparing working papers or case studies for the relevant sub-committees ◇ Submitting papers to sub-committees for recommendations ◇ Submitting the recommendations to the Council for assessment and decisions ◇ Conveying the Council's decisions to the appropriate applicant 	
	Procedures

Brunei Darussalam

Key information on education system and credits and learning outcomes in particular

Credit system	Higher education is provided by the University of Brunei Darussalam and various technical and vocational institutes.
Description	<p><u>UBD (Universiti Brunei Darussalam)</u></p> <ul style="list-style-type: none"> ◇ A 4-year undergraduate degree (single major) requires 128 modular credits, double major degree programme requires between 128-140 modular credits. ◇ A double degree requires 168 modular credits. ◇ The master programme requires between 60-70 modular credits. ◇ There is no modular credit for a PhD degree as it requires no coursework at all. <p><i>Note:</i> Each modular credit is equivalent to a 2-half hours of workload per week (lecture and tutorial)</p> <p><u>ITB (Institut Teknologi Brunei)</u></p> <p>ITB's first degree programmes which were introduced in August 2009. Use of credit values (CV) to describe the amount of learning. 1 CV represents 10 notional hours of learning. A student needs 440 CV to graduate with a Bachelor's degree</p>
Application of credit system in HEI obligatory?	No, each university in Brunei Darussalam has the flexibility to design its own credit system including University Brunei Darussalam. There is no standard policy or system set up by the Higher Education Department of the Ministry of Education
Credit transfer system	Under agreement, apart from ACTS, student credit transfer between University Brunei Darussalam and other foreign universities is done on a case by case basis. Modules to be taken by the students at the foreign universities must be agreed/decided in advance with the Faculty (in University Brunei Darussalam) by comparing the syllabus and detail contents of each module
Linkage of learning outcomes and credits	UBD encourages all modules to instill the seven learning outcomes. Some specific modules, however, can have specific learning outcomes (e.g. business communication, Discovery Year – internship, community service, incubation project, etc).
Measuring of student workload	Each modular credit is equivalent to a 2-half hours of workload per week (lecture and tutorial)
Linkage of student workload and credit system	Each modular credit is equivalent to a 2-half hours of workload per week (lecture and tutorial)
Comments on credit system	<ul style="list-style-type: none"> ◇ Students are more flexible to design their degree ◇ Facilitate the internationalisation of University Brunei Darussalam through the possibility of a common platform/currency for student exchange (modules and credit transfer)

Cambodia

Key information on education system and credits and learning outcomes in particular

Higher education institutions cover Arts, Sciences, Foreign Languages and Teacher Training (Sakal vityala Phnôm Penh (University of Phnôm Penh)); Technology (Institute of Technology of Cambodia); Economics and Law; Business; Medicine (University of Health Sciences); Agriculture (Royal University of Agriculture); Fine Arts (Royal University of Fine Arts); Agriculture and Management (Maharishi Vedic University).

There are also technical professional training institutions. The Ministry of Education, Youth and Sport has overall responsibility for higher education institutions. All institutions receive financial support from the Government. Private institutions were created recently. They include Norton University; the Institute of Technology and Management; the International Institute of Cambodia and the Faculty of Management and Law in Phnom Penh and the Faculty of Washington DC and the Institute of Management and Economics in the provinces.

Higher education credentials

University level studies

University level first stage: Diploma, Licence, Bachelor's Degree, Baccalaureate: For non-degree programmes (DUT, DEJP etc...), the minimum requirement of study is two to three years. Studies leading to the Bachelor's Degree or equivalent (eg. Licence) last for at least four years. In general, study programmes are divided into two sequences. The first lasts for two to three years and provides general education (foundation years or common courses) and the last offers specialization or professional education. Students follow their respective course programmes in the first and second sequence and sit for examinations during and at the end of each stage. They graduate when they have successfully passed all examinations.

Description

Cambodia

Key information on education system and credits and learning outcomes in particular

Description	<p>They must also pass a final examination.</p> <p>In some institutions students obtain a Diploma at the end of the first sequence. For instance, the Institute of Technology of Cambodia awards the University Diploma of Technology. In addition to examinations, students are required to present a project in order to obtain their degree. Practical experience in private or public enterprises during the period of study is mandatory. In Medicine, Pharmacy and Dentistry, although they have followed an internship during the last year of study, degree holders are required to work for one year or more after graduation before they are able to practise.</p>

Quality assurance (QA)	
QA body	AAC (Accreditation Committee of Cambodia)
Scope (programme / institution)	<ul style="list-style-type: none"> ◇ Institution accreditation (for institutions which confer Bachelor, Master and Ph.D) ◇ Accreditation is the jurisdiction of the AAC ◇ Establishment and management or supervision of higher education institutions are the jurisdiction of the MoEYS (Ministry of Education, Youth and Sport)
Qualifications framework	<p>No comprehensive qualifications framework and standards.</p> <p>No consistency among HEIs (by ten different ministries)</p>
Voluntary / compulsory	Compulsary for higher education institutions
Procedures	<p><u>Type:</u></p> <ul style="list-style-type: none"> ◇ Provisional accreditation-subject to ACC's approval (HEIs with provisional must report annually to ACC on their progress) ◇ Full accreditation-conferred to HEIs which meet minimum standards with the mandate for five years <p><u>Process of assessment:</u></p> <ul style="list-style-type: none"> ◇ HEIs apply for accreditation to the secretariat general of the AAC ◇ The Dept. of Standard and Accreditation directly communicates to HEIs in case further information is required ◇ Secretary General of AAC appoints a team of technical staff and external assessor to conduct site visit and assessment processes at the HEI

Cambodia

Key information on education system and credits and learning outcomes in particular

- ◇ The team of assessor and technical staff prepare the assessment report and submits it to the secretary general Procedures
- ◇ The Dept. of Standard and Accreditation concludes the report and submits it to the secretary general for further comments and to propose ACC board for final decision.

Yes, since year 2000 change from semester and module/block system into credit system

Credit system

China

Key information on education system and credits and learning outcomes in particular

Higher education system	The State is responsible for the overall planning of higher education. It establishes higher education institutions with the active participation of society. Since 1998, the higher education institutions enjoyed more autonomy. Higher education consists of regular higher education, adult higher education and technical and vocational education and training. The academic degree system is divided into three levels. Most higher education institutions divide their academic year into two semesters, with the first semester starting in September and the second in February. Since 1992, there are private universities in China.
Number of students in higher education	241 million
Types of higher education institutions	<ul style="list-style-type: none"> ◇ University ◇ Institute ◇ College ◇ Academy ◇ Conservatory ◇ Vocational Institute ◇ Vocational College
Number of higher education institutions	2,263 regular higher education institutions
Higher education credentials	<ul style="list-style-type: none"> ◇ Diploma ◇ Bachelor's Degree ◇ Master' Degree ◇ Doctor's Degree
University level studies	<ul style="list-style-type: none"> ◇ Bachelor's Degree: 4-5 years ◇ Master's Degree: 2-3 years ◇ Doctor: 3-4 years
Description	<ul style="list-style-type: none"> ◇ Bachelor degree: awarded to students who understand basic theory in a field of work or study, master well related knowledge and fundamental skills, and who demonstrate essential capacity to assume a job or do a research. ◇ Master degree: awarded to students who understand profound theory in a field of work or study, master comprehensive knowledge, able to manage different skills to solve complex problems, and demonstrate independent capacity to assume a job or do a research. ◇ Doctor degree: awarded to students who understand the most advanced theory in a field of work or study and at the interface between fields, master the most specialised skills and techniques, have strong capacity of research and have already made certain accomplishment in a field.

China

Key information on education system and credits and learning outcomes in particular

- ◇ Multilateral agreements concerning recognition of foreign studies, for example: Convention On the Recognition of Studies, Diplomas and Degrees in Higher Education in Asia and Pacific, Year of signature: 1983
 - ◇ Bilateral agreements concerning recognition of foreign credentials. For example: China has signed agreements on mutual recognition of studies, diplomas and degrees with 34 countries as follows: Vietnam (2009); Korea, Cuba (2008); Spain, Denmark, Thailand, Australia, France (2007); Kazakhstan, Sweden, Ireland (2006); Italy, Netherland, Portugal (2005); Austria, Hong Kong, (2004); New Zealand, Great Britain (2003); Germany, Kirgizstan (2002); Mongolia, Ukraine, Belarus (1998); Egypt, Hungary (1997); Romania, Russia (1995); Cameroon (1994), Uzbekistan (1993); Mauritius (1992), Algeria, Peru (1991); Bulgaria (1990); Srilanka (1988)
 - ◇ ASEM
- Participation of country in multilateral or bilateral higher education programmes

QA in China is divided into 2 parts: QA for undergraduate education and QA for postgraduate education.

Quality assurance (QA)

- ◇ Undergraduate level:
Higher Education Evaluation Center of the Ministry of Education (HEEC)
- ◇ Postgraduate level:
China Academic Degree and Graduate Education Development Center (CADGEC)

QA body

HEEC conducts institution evaluation and programme evaluation, CADGEDC conducts mainly programme evaluation.

Scope (Programme / Institution)

adopted

Credit system

China has been using the scholastic year system since the 50s last century. Since 1978, Chinese universities have gradually adopted the credit system. However, there is no "one" credit system employed by all HEIs. In fact, universities and colleges define their own credit systems, only applied in their own institutions.

Description

Today most Chinese HEIs apply the credit concept to measure student workloads. Chinese Ministry of Education also encourages the employment of credit system. But there is not yet the obligation to apply it. HEIs have the right to conceive and apply the credit system which suits them.

Application of credit system in HEI obligatory?

The Credit System is the trend of education reformation; many universities in China are taking it into action.

China

Key information on education system and credits and learning outcomes in particular

Credit transfer system	Student mobility between universities are realised in China mainly by two ways: first, partnership between universities; second, personal application by student. Credits recognition exists between universities with partnership or agreement on the issue, but not in all HEIs. Therefore there is not yet a developed credit transfer system in China.
Linkage of learning outcomes and credits	Yes If you want to get credit, your Learning outcomes (e.g. achievement of a course) must be qualified.
Measuring of student workload	Student workloads are used to be measured by number of courses studied and exams validated. Credits are now more and more used to measure student workload.
Linkage of student workload and credit system	Yes. There is some relationship between student workloads and the Credit System. In some universities, a credit requires students to have 16 hours' workload
Comments on credit system	The credit system is on development in China. There are discussions, explorations and experiments on how to develop a flexible credit system that can encourage autonomy and liberty in universities while assuring higher education quality. Credit system will with no doubt be an important point in future higher education reform, and a credit accumulation and transfer system is widely expected to facilitate student mobility, education transparency and academic exchange and cooperation.

India

Key information on education system and credits and learning outcomes in particular

Higher education in India starts after the higher Secondary or 12th standard. While it takes 3 years for completing a B.A., B.Sc or B.Com (Bachelor of Commerce) pass or honors degree from a college in India, pursuing an engineering course would take four years and five years (with six months of additional compulsory internship) for completing a bachelor of medicine or bachelor of law degree. Postgraduate courses generally are of two years duration. But there are some courses like Master of Computer Application (MCA) that are of three years duration. For those who cannot afford to attend regular classes for various preoccupations can pursue correspondence courses from various Open Universities and distance learning institutes in India.

Higher education credentials

University level studies

University level first stage: Bachelor:

First degrees generally require three years' full-time study leading to Bachelor of Arts, Science and Commerce degrees. Entrance to an Honours course may require a higher pass mark in the higher secondary or pre-university examinations. An Honours degree does not generally involve longer study but indicates greater specialization. In professional subjects, courses last for four to five and a half years. The Bachelor of Laws (LLB) can either be taken as an integrated first degree course (five years) or as a two to three-year course taken as a second degree.

Description

India

Key information on education system and credits and learning outcomes in particular

Description	<p><u>University level second stage: Master's Degree:</u> A Master's Degree in Arts, Science and Commerce generally requires two years of study after a first degree. Most are coursework-based without a thesis. The Indian Institutes of Technology offer three semester studies leading to ME, MSc (Eng) and MTech degrees. Master's courses in Engineering and Technology normally require two years' study after a first professional degree. Candidates must qualify through the Graduate Aptitude Test in Engineering Colleges. In Medicine and Surgery, the Master's degree takes two years after MBBS/BDS (Bachelor of Medicine, Bachelor of Surgery/Bachelor of Dental Surgery). The Master of Technology is awarded after a study period of three semesters. Students must complete a research project which usually takes one semester. The Master of Computer Applications (MCA) is awarded after three years' study beyond the Bachelor's Degree.</p> <p><u>University level third stage: Master of Philosophy, PhD:</u> One and a half-year MPhil programmes are open to those who have completed their second stage postgraduate degree. It is a preparatory programme for doctoral level studies. Some universities admit MBBS/BE degree holders to PhD courses. The PhD programme involves two years' study beyond the MPhil or a minimum of three years' study beyond the Master's degree and the submission of a thesis, as well as an oral examination.</p> <p><u>University level fourth stage: DSc, D Litt:</u> The Doctor of Science (DSc) and the Doctor of Literature (D Litt) degrees are awarded by some universities two to three years after the PhD for original contributions.</p>

two to six semesters must be added. Degree Certificates usually bear the inscription Sarjana followed by the subject. A minimum of 144 credits are needed to graduate.

University level second stage: Magister (S2):

The Magister (Stata Dua) is awarded after a further two years' study plus research. Some 36-50 credits beyond S1 are required to graduate.

University level third stage: Doktor (S3):

The Doktor (Strata Tiga) takes another two to four years beyond the Magister. In some cases, students can pursue Doktor degree programmes immediately after the first degree, depending on their potential. The Doktor degree is the highest award conferred by Indonesian universities or institutes. There is a residential requirement for 2 years and students must pass the examinations that are organized every year to check their research progress.

Japan

Key information on education system and credits and learning outcomes in particular

Higher education is provided by Universities 'daigaku', Post graduate schools 'daigaku-in', Junior Colleges 'tanki-daigaku' and Colleges of Technology 'koto-senmongakko', as well as by 'senmon gakko' (Specialized Training Colleges). These institutions may be public (national, prefectural or municipal) or private. The approval by the Ministry (or, in some cases of senmon gakko, local authority) is required to establish institutions.

Some 77 per cent of the 'daigaku' and 93 per cent of the 'tanki-daigaku' are private institutions.

Universities include one or several faculties offering courses in a variety of subjects. Public universities are mainly financed from national and local funds. Private universities and colleges are financed by students' fees and private funds. The national government provides private institutions with grants for part of their expenditures.

Japan

Key information on education system and credits and learning outcomes in particular

Yes.	Credit transfer system
According to credit transfer system stipulated by SEU, a student may transfer credits to/from a foreign university or junior college. Each University may determine the number of credits, including credit transfer, while keeping the substantiality of credit (workload, learning outcome, etc.)	
Yes.	Linkage of learning outcomes and credits
With regard to students who have completed one class, a university shall confer credits after setting examinations for them or by assessing its students' academic achievements in an appropriate method specified by the university. SEU stipulates that a university shall establish the classes (with credits derived from them) necessary to achieve its educational purpose as learning outcome of the university as a whole, respective colleges, departments, courses, etc. and shall organize the curricula systematically.	
Yes.	Measuring student workload
SEU stipulates university shall endeavour to avoid falling short of the standards specified by SEU including student workloads.	
Yes.	Linkage of student workload and credit system
SEU stipulates that a class for one credit shall normally be organized to contain contents that require 45-hour learning workloads, and the number of credits shall be calculated based on the following standards, in light of the educational effects of said class and required learning other than that during class hours, in accordance with class methods:	
<ul style="list-style-type: none"> ◇ Regarding lectures and exercises, one credit shall consist of classes conducted for a number of hours determined by a university between 15 hours and 30 hours ◇ Regarding experiments, practical training, and skills practice, one credit shall consist of classes conducted for a number of hours determined by a university between 30 hours and 45 hours; provided, however, that regarding skills practice classes tutoring in the artistic fields, one credit shall consist of classes conducted for a number of hours determined by a university; and ◇ When using two or more methods out of either lectures, exercises, experiments, practical training, and skills practice for one class, one credit shall consist of classes conducted for a number of hours determined by a university in light of the standards prescribed in the preceding two items, in accordance with the combination of such methods. 	

Japan

Key information on education system and credits and learning outcomes in particular

Linkage of student workload and credit system	Notwithstanding the provision of the preceding paragraph, regarding classes, such as graduation theses, graduation research, and graduation products, when it is deemed to be appropriate to confer credits by evaluating the achievement of such learning, the number of credits may be determined in light of the learning, etc. necessary for these activities.
Comments on credit system	While the current credit system as stipulated by SEU gives universities in Japan the certification that they keep the minimum standard, it is still important for them to make these processes (including their credit transfer process, grading policy, syllabus, etc.) more visible, and their curriculum more systematic (specifying clearer objective, arranging more effective course numbering, etc.).

Korea

Key information on education system and credits and learning outcomes in particular

There are seven types of institutions: colleges and universities (national, public and private); industrial universities; universities of education (national); junior colleges (national, public and private); Korea National Open University (national); technical colleges; and other types of institutions (private) such as seminaries.

Under the Education Act, all institutions of higher education, whether public or private, come under the responsibility of the Ministry of Education and Human Resources Development.

It exercises control over requirements of teaching staff, academic requirements, regulation for the founding of institutions, etc. With regard to other matters, universities should comply with the guidelines of the Korea Council for University Education (KCUE).

Description	<p><u>University level first stage: Bachelor's degree:</u> Courses leading to the award of the Bachelor's degree last for three to five years. They are awarded as First Class degrees, Second Class Upper with Honours, Second Class Lower with Honours, and General degrees. In Medicine, Dentistry, Veterinary Medicine and Architecture, the Bachelor's degree is awarded after five or six years.</p> <p><u>University level second stage: Master's degree:</u> The Master's Degree is conferred after two years' further study. Students must hold a Bachelor's degree with Honours at least at Second Class level and be able to pursue in-depth study in a given field or a combination of fields as well as a project in the proposed field of study. For the Postgraduate Diploma, the entry requirements are a Bachelor's Degree from the university or equivalent qualifications or other qualifications and experience acknowledged by the Senate.</p>

Malaysia

Key information on education system and credits and learning outcomes in particular

University level third stage: Doctor of Philosophy:

The Doctor of Philosophy degree is awarded after a minimum of two years' further study and research. The minimum entry requirements are a higher level Master's degree and the ability to pursue research in the proposed field. In addition, candidates must pass oral examinations and, in some cases, written examinations. Students must defend a thesis. There are also Higher Doctoral degrees for outstanding contributions to knowledge, e.g. Doctor of Science (DSc), Doctor of Letters (Dlitt) and Doctor of Laws (DLI). Some universities award a Doctoral Degree to known scholars on the basis of published work. An Honorary Doctoral Degree is awarded to those who have made an outstanding contribution to the field without pursuing typical academic careers.

- ◇ Master's Degree: 1.5 years
- ◇ Doctor's degree: 3 years

The Education Law states that the program leading to the BA degree must be not less than 120 credits. In practice, it takes 4 years of study as a minimum. Exception can be seen in medicine, dentistry, pharmacy, and veterinary science, which has total credits, reaches up to 180 and requires up to 6 years of study.

Master's programs have been designed to accumulate at least 30 credits at master's level courses with a bachelor's degree entry. Up to 6 credits of the thirty may be counted for a thesis component. Duration of study is 1.5 years.

Doctoral programs require advanced level courses and the completion and defense of a dissertation work, altogether not less than 60 credits after the master's degree. 12 credits of the total are for the dissertation. Duration of study is 3 years.

Key information on education system and credits and learning outcomes in particular

Credit system	
A credit hour is an academic content measuring unit of higher education. One credit hour is equal to 40 hours of study which are 4-day workload of an average fulltime student.	Description
Yes.	Application of credit system in HEI obligatory?
Higher education institutes have the right to correspond a degree certificate and subjects passed during the course. In this way, students are able to shorten duration of their study not revising the subjects passed, and cut back on education.	Credit transfer system
The program leading to the BA degree must be not less than 120 credits, as of master and doctoral degree studies; they shall be no less than 150 and 210 credits respectively, including credits of previous level studies.	Linkage of learning outcomes and credits
Credit hours of a subject are the overall time spent by a student for researching this subject which includes auditorium hours, independent study hours, time for consulting, doing class works, writing papers, doing homework, and assessing knowledge and skills of the student.	Measuring of student workload
The lowest workload of a fulltime student shall be 12 credit hours for a semester.	Linkage of student workload and credit system
An academic year of Mongolian universities, usually, consists of 2 semesters which have 16 weeks. Credit hours are allocated according to the training plan that one subject shall be studied within on semester. A credit hour is represented by a whole number. In some cases, it can be fractioned by 0.5. In case of over contented subject which seems to be researched during several semesters, it is divided into separate subjects with sequenced content and each subject has a name and credit hours are allocated to it.	Comments on credit system

Key information on education system and credits and learning outcomes in particular

University level first stage: Bachelor's degree:

The Bachelor (pass degree) is obtained on successful completion of a three-year course (four-year courses in Law and in Education) and the Bachelor (honours) degree after an additional year. The Bachelor's degrees in Engineering, Architecture and Forestry require five to six years' study. In Dentistry, Medicine and Veterinary Sciences studies last for six to six-and-a-half years. In Law, the Bachelor's degree requires 4 years of study.

University level second stage: Master's degree, Postgraduate Diploma: Master's degrees (MA, MSc, MEd, MDSc, MAgrSc, MPhil, etc.) are conferred after two years' study beyond the Bachelor's degree. Masters Degree can be obtained by those who qualified at Master Degree course. Postgraduate Diplomas are also offered in some institutions following one or two years' study.

University level third stage: Doctorate: A PhD is conferred by certain universities after at least four years' further study and research.

Since 2002, the Higher Education Commission (HEC) is empowered to carry out evaluation, improvement and promotion of higher education, research and development, to formulate policies, guiding principles and priorities for higher education institutions and to prescribe conditions under which institutions, including those that are not part of the State educational system, may be opened and operated.

The mandate of HEC encompasses all degree granting universities and institutions, both in public and private sectors and supports the attainment of quality education by facilitating and co-ordinating self-assessment of academic programmes and their external review by national and international experts.

HEC also supervises the planning, development and accreditation of public and private sector higher education institutions. Its goal is to facilitate the reform process.

The Philippines

Key information on education system and credits and learning outcomes in particular

Higher education consists of collegiate, Master's and Doctorate degree programmes in various fields or disciplines including the post-secondary schooling leading to one-, two- or three-year non-degree technical or vocational courses.

Higher education is provided by higher education institutions (HEI) composed of public and private universities and colleges.

The state universities and colleges (SUCs) on which charters have been conferred, are autonomous. In terms of enrolment, a huge majority of students are in private HEIs.

The Commission on Higher Education (CHED) created in 1994 oversees both private and public tertiary schools, the Technical Education and Skills Development Authority (TESDA) postsecondary technical and vocational education, while the Department of Education is in charge of basic education (elementary and high school).

University level studies

University level first stage: Bachelor's Degree:

A Bachelor's Degree is generally conferred after four years' study. The minimum number of credits required for four-year Bachelor's Degrees ranges from 120 to 190. In some fields, such as Business, Teacher Education, Engineering and Agriculture, one semester's work experience is required. In Pharmacy, some HEIs choose to offer the five-year programme with permission from CHED. An internship is required prior to the board examination in Community Pharmacy, Hospital Pharmacy and Industrial

Description

The Philippines

Key information on education system and credits and learning outcomes in particular

Description	<p>Pharmacy. Medical Technology and Radiology Technology are four-year courses with a one examination in Community Pharmacy, Hospital Pharmacy and Industrial Pharmacy. Medical Technology and Radiology Technology are four-year courses with a one-year internship at the 4th year level in an accredited training centre/hospital. Physical Therapy/Occupational Therapy is a five-year course with a clinical internship at the fifth-year level in an accredited training centre/hospital. Nutrition and Dietetics is a four-year course with supervised field experience in the second semester of the fourth-year level in Hospital, Food Service and Public Health. In Engineering, Architecture and Music the Bachelor's Degree is conferred after five years' study and in Dentistry and Veterinary Medicine after six years. Medicine and other Health-related programmes require one year's internship or clerkship in an accredited training centre/hospital. In Dentistry, there is a two-year preparatory course and a four-year course. The Veterinary Medicine course comprises two clerkships, three internship units and 14 field experience units. The Bachelor of Science in Nursing is obtained after four years' study at a college or university. Related learning experiences start during the second semester of the 1st year level.</p> <p><u>University level second stage:</u> Post Baccalaureate (Certificate/Diploma); Master's Degree:</p> <p>Certificates and Diplomas are conferred on completion of one or two years of study beyond the Bachelor's Degree. They are not equivalent to a Master's Degree. To be admitted to the Master's Degree, students must have a general average of at least 85 or B or 2 in the undergraduate course. The Master's Degree normally requires a further two years' study (in Architecture five). In Law, students must already have obtained a four-year Bachelor's degree in another subject and secured a Certificate of Eligibility for Law from the institution in which they wish to enrol. The degree often takes eight years to obtain. In Medicine, students must first obtain a Bachelor's degree in another relevant subject before beginning a four-year course in Medicine.</p> <p><u>University level third stage:</u> PhD:</p> <p>To be admitted to a Doctorate programme, students must have an average of at least 1.75 in the Master's Degree. The PhD requires a further two to three years' study (minimum) following upon the Master's Degree and a dissertation. In Medicine, after having followed a three-year course, students follow a one-year clinical clerkship, a one-year internship and three to five years' residency for specialization.</p>

Singapore

Key information on education system and credits and learning outcomes in particular

Education system overview	<p>The main policy objective for the Singapore education system is to bring out the best in every pupil, developing sound moral values, good citizenship, and the skills necessary to meet the demands of a rapidly changing world. The national curriculum strives to achieve these goals.</p> <p>Pre-school education is not part of the national education system. Pre-schools and kindergartens usually are run by private organizations. If these organizations apply and meet certain standards, they may be licensed by the government. However, this license is not an operating requirement.</p> <p>The Singapore Government continues to believe in, and invest heavily in, education for the whole person development of all children. The introduction of the Compulsory Education Act in 2003 seeks to ensure that all Singapore citizens are enrolled in National Schools up to Primary 6. The 6-year education aims to give all our children a common core of knowledge that will provide a strong foundation for further education, and a common educational experience which will help to build national identity and cohesion.</p> <p>Entering primary school at age six, a child spends six years learning basic subjects and beginning the study of English and a mother-tongue language. Except for select subjects taught in the mother tongue, English is the language of instruction in most schools. After successfully passing the Primary Leaving School Examination (PSLE) during the sixth year, the student enters secondary school for an additional four or five years of education.</p> <p>At the secondary level, students are placed in the Express, Normal (Academic) or Normal (Technical) course based on their PSLE scores. The different curricular emphases are designed to match their learning abilities and interests. Students can move from one course to another based on their academic performance.</p> <p>Students in the Normal (Academic) course will offer academically-based subjects while those in the Normal (Technical) course will follow a curriculum that is more practice-oriented and hands-on. Students in both courses have to sit for the Singapore-Cambridge General Certificate of Education (Normal Level) Examination. After the GCE 'N' level examination, students from the Normal (Academic) course who satisfy the requirements go on to a fifth year of study, where they will sit for the GCE 'O' level examination at the end of the year.</p> <p>Students with a passion for the arts, music and languages can select from a range of elective programmes that focus on these specific areas of interests. They can also choose to take up advanced elective modules in applied areas such as Information Technology, Business, and Engineering offered in some schools.</p> <p>Some schools also offer the Integrated Programme (IP), which provides a seamless education where secondary school students can proceed to pre-university without sitting for the GCE 'O' level examination. Schools offering IP will optimise the time freed up from preparing for the 'O' level examination to stretch the brighter students and provide greater breadth in the academic and non-academic curriculum.</p>
----------------------------------	--

Singapore

Key information on education system and credits and learning outcomes in particular

Following the GCE “N” or “O” level examinations, students have three options for post-secondary education depending upon their desires and qualifications. They may enroll in the Institute of Technical Education (ITE) for specialized training or certificate programmes.

Education system overview

Students with appropriate GCE “O” levels may attend the polytechnics to pursue diploma courses or they may enroll at junior colleges or pre-university centres to prepare for the Singapore-Cambridge General Certificate of Education “Advanced” (GCE “A”) level examination. Although, junior colleges may be considered part of post-secondary education, no diplomas or degrees are awarded. The course work focuses on requirements for the GCE “A” level subjects. These studies provide the type of general education that frequently is found in the first year of university education in other countries. Results on the GCE “A” level examination determine the students’ eligibility for tertiary education.

As at 2008, there were 50,904 enrolled in the Universities, 71,137 enrolled in the Polytechnics, 24,593 enrolled in the Institute of Technical Education, and 4,077 enrolled in the two Arts Institutions.

Number of students in higher education (full-time enrolment)

MOE oversees the provision of tertiary and technical education in Singapore. Post-secondary educational institutions comprise five Polytechnics, the Institute of Technical Education (ITE), and four autonomous universities (the National University of Singapore, the Nanyang Technological University, the Singapore Management University and the Singapore University of Technology and Design).

Higher education system

MOE also offers subsidised places through SIM University for part-time continuing education training programmes, as well as the Singapore Institute of Technology offers degree programmes in partnership with overseas universities.

The Council for Private Education (CPE), a statutory board under the MOE, regulates the private education institutions sector.

Findings for European ASEM member countries

Learning outcomes and credits systems: findings from the National Stocktaking 2009

Stocktaking, first carried out in 2005, was defined as one of the Bologna action lines amongst nine others in the Bologna work programme 2007—2009. the overarching aim is to assess progress being made so far and identify issues that need to be addressed to ensure the functionality of the European Higher Education Area in practice. The national reports illustrate the state of implementation of issues associated with the Bologna process and reveals further need of action.

The following compilation concentrates on results from the national reports 2009 with regard to credit systems and learning outcomes.

Findings for European ASEM member countries

Current developments in EU Bologna countries

Efforts should concentrate in future on removing barriers to access and progression between cycles and on proper implementation of ECTS based on learning outcomes and student workload.

London Communiqué “Towards the European Higher Education Area: responding to challenges in a globalised world”, March 18, 2007

The 2009 Stocktaking report reveals an interesting picture of a multi-speed Europe regarding the implementation of ECTS and learning outcomes.

Learning outcomes are an essential part of ongoing efforts to reform higher education and the vocational training sector in countries participating in the Bologna process. They are regarded as a contribution to different aspects of education, such as qualification frameworks, lifelong learning, credits, workload and credit systems, mobility and recognition, curricula reforms, as well as quality assurance. Nearly all European ASEM member countries have taken initial, some even further steps to implement learning outcomes.

Information on the exact state of implementation of credits and learning outcomes across the EU Bologna countries is patchy, as national reports on the subject vary in detail, but reliable.

In effect, the success of the Bologna Process depends on the comprehensive implementation of a learning outcomes approach in higher education. Learning outcomes are used in the Dublin descriptors, which are the basis of the three-cycle degree system. They also feature in the overarching framework of qualifications in the EHEA with which national frameworks are being aligned. They are an essential ingredient in quality assurance systems and in ECTS -compliant procedures for credit accumulation and transfer. They make transparency and recognition of qualifications more easily manageable. In short, learning outcomes encapsulate a learner-centred approach and shift the focus in higher education away from the traditional teacher-centred or institution-centred perspective.

...

The ECTS is a mechanism for the recognition of smaller “bundles” of learning outcomes than those associated with traditional qualifications, for the purposes of credit accumulation and transfer. It is particularly relevant in promoting student mobility and providing flexible pathways for lifelong learning, since learners can gather credits towards qualifications over a longer period if the conventional model of whole-time study is not suitable to their personal circumstances. Although ECTS has been part of the Bologna process since 1999, it is still not fully implemented across all the countries. In the 2009 stocktaking, credits had to be demonstrably linked with learning outcomes, so the scores on this indicator shifted downwards compared to 2007, when it was enough that ECTS was used for both credit accumulation and credit transfer. This indicates that there is still not enough integration at national level between the qualifications framework, learning outcomes and ECTS, as was suggested in the 2007 report. Many countries appear to have pursued these action lines separately without paying adequate attention to how they could be integrated in policy and practice.

Findings for European ASEM member countries

Current developments in EU Bologna countries

While the 2009 stocktaking has not allowed for a formal statistical correlation of countries' scores on the various indicators, it is clear from the analysis of national reports that the most "successful" and high-scoring countries are those where learning outcomes have become embedded in higher education practice. These countries have generally made most progress on implementing national qualifications frameworks, lifelong learning and recognition of prior learning. Their quality systems are also more fully developed, and they have fully implemented the diploma supplement and ECTS. In conclusion, it is abundantly clear both from the 2009 stocktaking and from other international studies that effective implementation of learning outcomes is linked to successful achievement of major Bologna Process goals, including in particular the development of national qualifications frameworks integrating the three-cycle degree system; credit transfer and accumulation; recognition of qualifications and of prior learning, and provision of flexible learning paths as part of the lifelong learning continuum. Conversely, the slow movement of many countries towards adopting a learning outcomes approach is an obstacle to progress on these other important goals. This represents a significant challenge for ministries and higher education institutions over the coming years. Many countries are still in the early stages of developing and implementing learning outcomes and qualifications frameworks.

...

Nevertheless, the results indicate that implementation may sometimes be more advanced at institutional level than at national policy level: in some cases HEI s have gone ahead and started developments (e.g. writing learning outcomes) while awaiting formal decisions establishing the framework. Such initiative is seen as positive; however it is important to ensure that all developments within the country are consistent with a coherent national qualifications framework.

...

General recommendations to all stakeholders

... Using the tools that have already been created within the Bologna Process will help to create a true culture of lifelong learning throughout the EHEA, with explicit links between learning outcomes, qualification frameworks, quality assurance systems and recognition.

...

Recommendations to countries

... Work towards achieving coherence in describing all higher education programmes using learning outcomes, to enhance transparency of qualifications and to facilitate the full implementation of ECTS and the diploma supplement.

Findings for European ASEM member countries

The exact state of implementation—Findings from the national reports 2009

Learning outcomes and recognition

Number of higher education institutions having described their programmes in terms of learning outcomes

According to the national reports, **in nearly a quarter of the EU countries**, all HEIs have described their programmes in terms of learning outcomes, while about two fifths of the countries said that most HEIs have done it.

all	most

Improving understanding of learning outcomes

Several countries have introduced a number of support measures to improve implementation of ECTS: seminars, assistance by Bologna experts, international projects, and national financial incentives.

All but one country apply measures to promote better understanding of learning outcomes; three-fifths report that action to improve measuring and checking of student workload is being taken, and except two all countries carry out support measures for teaching staff.

National higher education system diagrams

The following content has been taken from the publication “Focus on Higher Education 2010: The Impact of the Bologna Process”, that was prepared for the European Ministerial Conference in Budapest / Vienna, March 11—12, 2010. The report was published by the Education, Audiovisual and Culture Executive Agency (EACEA P9 Eurydice) and is available on the Internet at <http://www.eurydice.org>.

The information on national higher education systems is designed to give an overview on higher education institutions in the European ASEM member countries. The system information is complemented by diagrams illustrating the consequences of the Bologna process degree structures.

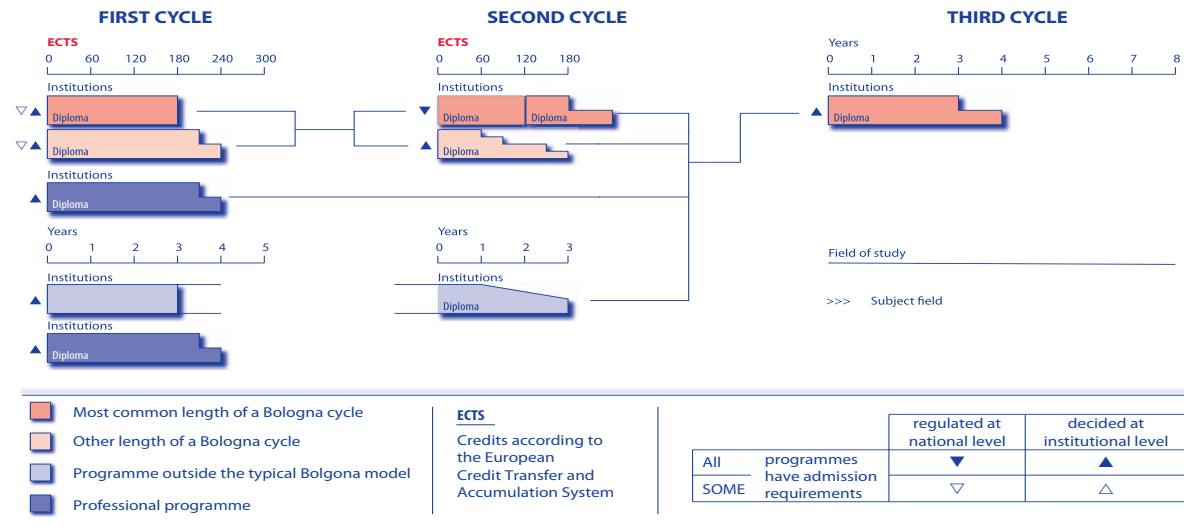

In preparation of the ASEMME3, the ASEM Education Secretariat offered the EU-Bologna countries the opportunity to update the information.

To preserve the integrity of the Eurydice document these updates are to be found at the end of the present chapter

GUIDE TO THE DIAGRAMS

The intention of the following diagrams is to present clear and comparable information about higher education systems, illustrating the impact of the Bologna process on contemporary degree structures. They do not provide comprehensive information on all qualifications in a higher education system, and for such information, the reader should consult existing National Qualifications Frameworks.

The basis for reading country diagrams is the **three-cycle structure** as agreed in ministerial communiqués. The diagrams present the main possible study paths through each higher education system. Starting on the left, the three cycles are shown consecutively. The first cycle generally leads to a Bachelor degree, the second cycle to a Master and the third cycle to a Doctoral qualification.

GUIDE TO THE DIAGRAMS

The **duration of cycles** reflects the typical Bologna model. First-cycle qualifications comprise 180-240 ECTS credits while second-cycle qualifications comprise 60-120 ECTS credits. The third cycle is shown in years, as are those programmes outside the typical Bologna model.

Vertical lines show the end of a qualification, usually indicating access both to the labour market and to the next cycle. Some short-cycle degree-awarding programmes may require additional studies in order to continue to the following Bologna cycle. These cases are represented by a vertical line **within** a degree cycle box. Where **programmes extend across two cycles**, e.g. for integrated long programmes, this is indicated by a broken line between the two cycles.

The '**most common duration of a Bologna cycle**' in a national higher education system is shown first in each diagram.

'**Other durations of a Bologna cycle**' reflect programmes in the typical Bologna model that are less common in a higher education system.

'**Programmes outside the typical Bologna model**' deviate from the three-cycle structure or differ in length from the typical Bologna model. For these programmes, the corresponding **fields of study** are provided on the right hand side of the diagram.

'**Professional programmes**' are shown when countries consider that professional and academic programmes are differentiated in a national system and when these professional programmes are an integral part of the higher education system.

The **generic degree title awards** are named in the diagram. This does not preclude further specification of degrees, for example by subject area, in individual higher education systems. The generic **names of institutions** are also provided for all programmes in each cycle.

All boxes representing programmes are of **equal height**. Qualitative differences are shown by colours. Where study programmes are offered for various lengths of time (e.g. a first cycle degree of 180 and 240 ECTS), this is indicated by a box with staggered height levels. Where programme lengths are not clearly defined (most often in the third cycle), a sloping line indicates the normal range of duration.

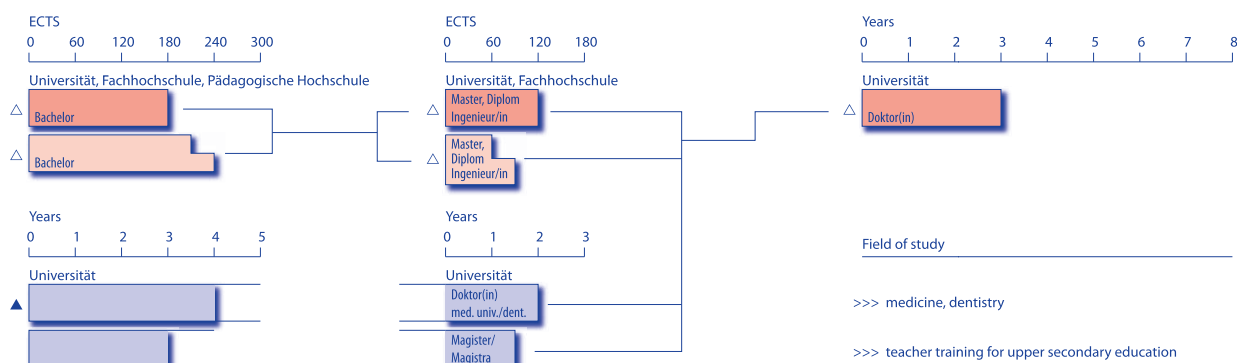

The existence of **admission requirements** for programmes is indicated by a triangle. An **upward pointing triangle** indicates that selection procedures exist at institutional level. A **downward pointing triangle** indicates that selection procedures exist at national level. A **filled-in triangle** means that this is always the case and an **empty triangle** means that it is the case in some programmes and/or some institutions.

Lines between cycles indicate possible connections within programmes. They do not imply automatic or necessary progression.

Diagrams do not indicate opportunities that may exist for students to undertake several programmes at the same level simultaneously, to embark on fresh first and/or second-cycle studies after obtaining a first or second-cycle qualification, or to transfer between programmes leading to a first-cycle qualification.

System overview and key information

Number of students in higher education 2008/09	153 399	Regulation of the Recognition of Prior Learning	Universities are authorised to organise, under specific conditions, access without the required degree to a limited number of second-cycle programmes, as well as to grant exemptions in order to reduce the length of programmes. Concerning the recognition of non-formal and informal learning by the <i>hautes écoles</i> , the Act specified more precisely the recognition procedure: in the case of entering a second-cycle programme, applicants have to prove at least 4 years of professional experience and the required knowledge and skills through an assessment procedure; in the case of exemptions, applicants have to prove 3 years of professional experience and exemptions cannot exceed 20 % of the total programme duration. Recognition of non-formal and informal learning in art schools was introduced by the Government Act of 17 July 2002 and it regulates access to a second-cycle programme based on professional experience.

Number of recognised higher education institutions	144
Quality Assurance Agency membership of the European Association for Quality Assurance in Higher Education (ENQA)	Quality Assurance Agency for Higher Education http://www.qaa.ac.uk/
Name of Quality Assurance Agency membership of the European Quality Assurance Register (EQAR)	No
Other National Quality Assurance Agency	No
Lisbon Recognition Convention	
Ratification	23 May 2003
Entry into force	01 July 2003

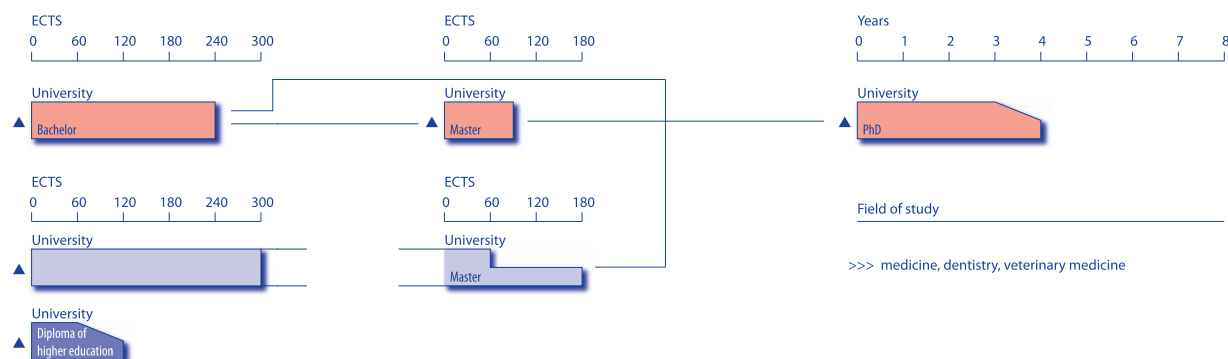

Regulation of the Recognition of Prior Learning	There is no legislation that regulates recognition of prior learning in England, Wales and Northern Ireland, but there is a long tradition of recognition of prior learning and encouraging mature students to participate in higher education. Recognition of prior learning is a matter for individual higher education institutions but the Quality Assurance Agency for Higher Education (QAA) has published detailed guidelines to support institutions. www.qaa.ac.uk/academicinfrastructure/apl/APL.pdf
Status of Recognition of Prior Learning	Permitted, but not a right
National Qualifications Framework	Completed
Credit system in place	National system and ECTS
Diploma Supplement	Partial and gradual introduction, free of charge and issued in English. Some higher education institutions in Wales issue the DS in the Welsh language upon request.
National mobility benchmarks and/or targets	Outbound: no target Inbound: 70 000 additional international students by 2011 compared to 2006.
Priority regions for attracting students	USA/Canada, Middle East, Latin America, Africa, Asia

Findings for the Third Group ASEM member countries

Australia

Key information on education system and credits and learning outcomes in particular

Higher education system

Number of students in higher education	1,134,866 in 2009, an increase of 6.5% from 2008.
Types of higher education institutions	There are 39 universities in Australia. Australia also has a number higher education providers not classified as universities and tertiary-level vocational colleges providing diploma and advanced diploma courses.
Number of higher education institutions	<ul style="list-style-type: none"> ◇ 37 public universities ◇ 2 private universities in Australia.
Higher education credentials	<ul style="list-style-type: none"> ◇ Requirements for admission to all programs are set by individual universities. ◇ Admission to undergraduate programs is usually based on successful completion of a total of 13 years of school education though some institutions use interviews, portfolios or demonstrated aptitude and most provide alternative pathways for mature-age (non-school leaver) students. ◇ Admission to postgraduate programs is based on the level of achievement in previous higher education studies. ◇ Admission to doctoral programs is usually based on high achievement in a Research Masters Degree or completion of a Bachelor Degree with First Class Honours or Second Class Honours Division A.
University level studies	<ul style="list-style-type: none"> ◇ Bachelor Degree (General) 3 years full-time study ◇ Bachelor Degree (Professional) 4 years full-time study ◇ Bachelor Degree + Honours 3-4 years full-time + 1 additional year's successful completion allows entry to a research Masters or Doctorate ◇ Masters by Coursework 1-2 years full-time study ◇ Masters by Research 1-2 years full-time study ◇ Doctoral Degree 3-5 years full-time study

Australia

Key information on education system and credits and learning outcomes in particular

University level first stage: Undergraduate Studies: Bachelor's Degree

University level second stage: : Master's Degree by coursework

University level third stage: Master's Degree by Research

Description

- ◇ Australia participates in bilateral cooperation in education through the EU-Australia Partnership Framework
 - ◇ Australia's universities form individual partnerships with overseas universities.
 - ◇ Australian universities are experienced in the UMAP system of credit transfer.
- Participation of country in multilateral or bilateral higher education programmes
- ◇ Australia and the EU have agreed in principle to move to a treat-level agreement on cooperation in education.
- Prospective reforms

Yes

Quality assurance (QA)

Australian Universities Quality Agency

QA body

- ◇ Programme and institution
- ◇ Note programs for international students are also quality assured under provisions of the Education Services for Overseas Students Act

Scope (programme / institution)

Yes – Australian Qualifications Framework (AQF)

Qualifications Framework

Compulsory

Voluntary / Compulsary

- ◇ Institutions must be registered on the AQF Register of Recognised Institutions and Authorised Accreditation to provide education services in Australia.
- ◇ Programs and institutions providing courses for international students must be registered under the Commonwealth Register of Institutions and Courses for Overseas Students (CRICOS). All of Australia's universities are currently CRICOS-registered.

Procedures

Credit system

Australia's higher education providers are semi-autonomous institutions and each provider may have different ways to determine subject units for credit. A full time load of 4 subjects each with 10-12 units per semester is a common approach, but this is not uniform across all higher education providers in Australia.

Description

All higher education providers in Australia are required to align with the Australian Qualifications Framework which defines qualifications on the basis of full-time study

Australia

Key information on education system and credits and learning outcomes in particular

Credit system

Description	<p>A Bachelor Degree is 3 years full-time study. A Masters Degree 1-2 years and a Ph.D. is 3-5 years full time study.</p> <p>The Australian Qualifications Framework provides guidelines for learning outcomes, pathways, assessment and accreditation of qualifications, allowing students to move easily between levels of study and institutions, receiving credit for previous study</p>
Application of credit system in HEI obligatory?	<p>Yes</p> <p>All higher education providers must be listed on the Australian Qualifications Framework Register of Recognised Institutions and Authorised Accreditation Authorities.</p> <p>The Australian Qualifications Framework has a broader scope than a credit system. It defines qualifications on the basis of full-time study duration rather than units/credits</p>
Credit transfer system	<p>Yes.</p> <p>All higher education providers in Australia are required to align with the Australian Qualifications Framework which defines qualifications on the basis of full-time study duration rather than units/credits.</p> <p>A number of arrangements may be in place between individual Australian universities and overseas partner universities.</p> <p>Otherwise, the University Mobility in Asia and the Pacific (UMAP) credit transfer system is commonly used by Australian universities – and is itself modelled on the ECTS.</p>
Linkage of learning outcomes and credits	<p>Yes</p> <p>Although there is not a common credit system in use by all universities</p> <p>The Australian Qualifications Framework provides guidelines for learning outcomes, pathways, assessment and accreditation of qualifications, allowing students to move easily between levels of study and institutions, receiving credit for previous study</p>
Measuring of student workload	<p>Yes.</p> <p>Student workload is measured in Equivalent Full-Time Student Units (EFTSU).</p>
Linkage of student workload and credit system	<p>Broadly yes, although there is not a common credit system in use by all universities.</p>
Comments on credit system	<p>Australia's lack of a uniform credit system has not been a significant impediment in positioning itself as one of the largest providers of international education in the world.</p> <p>The Australian Qualifications Framework is a highly regarded quality assured national framework of qualifications in the school, vocational education and training (VET) and higher education sectors in Australia.</p>

New Zealand

Key information on education system and credits and learning outcomes in particular

Higher education system

469.107

Number of students in higher education

The New Zealand tertiary sector covers private training establishments (PTEs), institutes of technology and polytechnics (ITPs), wananga, universities and workplace training.

Types of higher education institutions

8 universities, 20 ITPs, 3 wananga

Number of higher education institutions

Entry to universities is open to those who meet the minimum requirements in the school-leaving examinations, NCEA Level 3. An increasing number of courses at New Zealand universities now have selective admissions, with the University of Auckland offering the largest number of selective-entry courses. Students over 21 do not need to meet the academic criteria demanded of school leavers, but are generally advised to take a bridging programme in preparation.

Higher education credentials

University level studies

Typically, a bachelor's degree will take three years, and a further year of study will lead to an Honours degree. Not every degree follows this 3+1 pattern: there are some four year degrees (which may or may not be awarded with Honours), and some specialist bachelor's degrees which take longer to complete. Typically, Honours may be awarded with first class, upper second class, lower second class or third class, but this can vary from degree to degree.

Description

A bachelor's degree may be followed by a Master's degree, usually involving a further two years study, though this can be shorter for a candidate who has an Honours degree. Masters degrees can also be awarded with Honours.

A candidate who has either a Master's degree or a bachelor's degree with Honours may be considered for entry to a doctoral degree, provided that it includes a research component of at least 90 credits

New Zealand

Key information on education system and credits and learning outcomes in particular

Quality Assurance (QA)

QA body	Universities New Zealand, through its Committee of University Academic Programmes New Zealand Qualifications Authority for tertiary education organisations other than universities.
Scope (programme / institution)	Both institutional and programme.
Qualifications Framework	Yes New Zealand Qualifications Framework http://www.nzqa.govt.nz/studying-in-new-zealand/nzqf/ The NZQF is a comprehensive framework which includes all quality assured qualifications offered in New Zealand from senior secondary school through to doctorates.
Voluntary / Compulsary	Compulsary
Procedures	Universities New Zealand, through its Committee of University Academic Programmes is responsible for accreditation of study programmes for universities. It has also established an independent Academic Audit Unit which undertakes regular reviews of whole universities. NZQA is responsible for the quality assurance system for tertiary education organisations other than universities. The NZQA Quality Assurance Framework includes: <ul style="list-style-type: none"> ◇ a legislative and regulatory framework for course approval and accreditation and in the case of private training establishments, registration with NZQA ◇ ongoing self-assessment by tertiary education organisations ◇ periodic external evaluation and review by a quality assurance body.

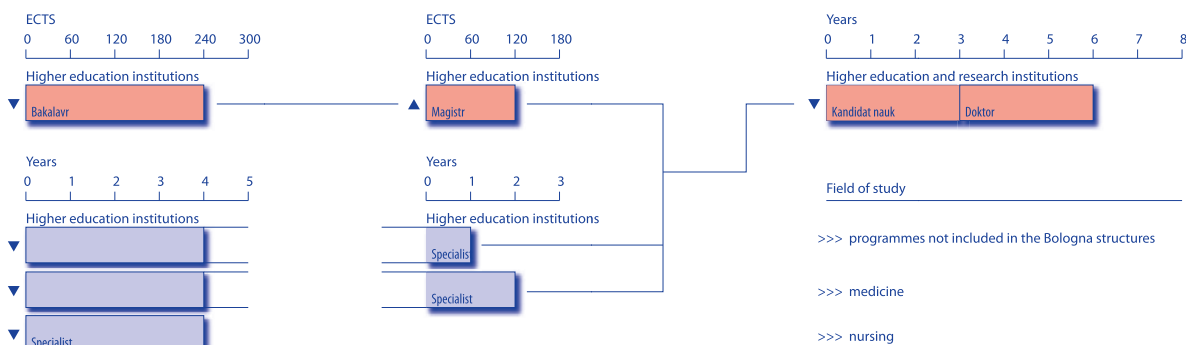

New Zealand

Key information on education system and credits and learning outcomes in particular

	Credit system
<p>New Zealand national system has existed for about 20 years, and is used across all levels from upper secondary to tertiary education and in both academic and vocational programmes.</p> <p>3 year Bachelor degree: Minimum 360 credits</p> <p>Master degree: additional 240 credits, except where the Bachelor degree was greater than 360 credits, where it may be reduced to a minimum of 120 credits</p> <p>Doctorate: At least 240 credits of advanced research at level 10 of the NZQF</p>	<p>Description</p>
<p>Yes.</p> <p>Both NZQA and UniversitiesNZ which are responsible for quality assurance for higher education programmes examine the fair allocation of credits in their processes.</p> <p>All qualifications registered on the NZQF must have been quality assured by one of these organisations</p>	<p>Application of credit system in HEI obligatory?</p>
<p>Yes</p> <p>All institutions in New Zealand use the common credit structure, and provision for credit transfer is an element that is considered in quality assurance.</p> <p>Institutions will look at the learning outcomes of individual courses in considering the nature of the transfer</p>	<p>Credit transfer system</p>
<p>Yes</p> <p>All Qualifications on the NZQF have a credit value. Each qualification clearly and concisely states information about its outcomes. It contains a graduate profile that clearly describes the skills, knowledge and application within outcome statements and expected education and employment pathways or contribution to the community resulting from achievement of the qualification.</p> <p>Each Qualification type (e.g. Certificate, Diploma, Bachelor degree, Doctoral degree) has the level outcomes defined</p>	<p>Linkage of learning outcomes and credits</p>
<p>Yes</p> <p>The credit value relates to how long it would typically take a person to achieve the stated outcomes in the context specified and to demonstrate that achievement through assessment.</p> <p>Notional learning hours include:</p> <ul style="list-style-type: none"> ◇ Direct contact time with teachers and trainers ◇ Time spent in studying, doing assignments, and undertaking practical tasks; ◇ Time spent in assessment 	<p>Measuring of student workload</p>
<p>Yes</p> <p>One credit is equal to ten notional learning hours</p>	<p>Linkage of student workload and credit system</p>
<p>The credit system operates across all areas of learning related to qualifications. It has operated for some years now and appears to work well.</p>	<p>Comments on credit system</p>
